

Have you heard? Americans are finding out...

Foreskin: NATURAL AND VALUABLE

The majority of the world's men have foreskin, which has purposes including penile protection, sexual function, and intense pleasurable sensation. If unfolded, an adult foreskin would be roughly the size of this card, 15 sq. inches!

Intact Body: HUMAN RIGHTS

International medical leaders have condemned American doctors for cutting the genitals of baby boys - there is no compelling medical need!

Sensitive Infants: PAINFUL CUT

Local pain relief is not always used, and when it is, it is never sufficient. The foreskin has to be ripped from the glans, crushed, and cut away. The procedure is always traumatic. Recovery hurts!

Beware: FORCED RETRACTION

Babies are born with the foreskin fused; if intact, don't retract. Clean what is seen.

Circumcision: DESTRUCTIVE

Function and sensation are always lost, but complications include excessive scarring, painful erections, skin bridges, loss of the penile head or shaft, even death.
